# CONTENTS.

## PART I.—AGRICULTURAL STATISTICS.

	PAGE.
THE WEATHER : General review, showing the monthly <i>temperature, rainfall, and sunshine</i> for the ten years 1893-1902 .....	5
VEGETATION : Spring Seeding .....	7
THE GRAIN CROPS : General description as to condition and harvest.	
Fall Wheat.....	8
Spring Wheat .....	9
Barley .....	9
Oats .....	10
Peas .....	10
Beans .....	10
Rye .....	11
Buckwheat .....	11
Corn .....	11
HAY AND CLOVER : General description .....	11
Clover seed.....	11
FIELD ROOTS : General description.	
Potatoes .....	12
Carrots.....	12
Mangels.....	12
Turnips .....	12
Sugar Beets.....	12
FRUIT AND FRUIT TREES : General description.....	13
MISCELLANEOUS :	
Flax .....	14
Hops.....	14
Lucerne .....	14
Rape .....	14
Tobacco .....	14
Threshing and Marketing .....	14
Farm Improvements .....	14
Fall Plowing .....	15
LIVE STOCK AND THE DAIRY : General review as to condition in 1902.	
Live Stock .....	15
Poultry .....	16
Average value per head .....	16
Bees and Honey. ....	17
The Dairy .....	17
Cheese Factories.....	17
Creameries .....	17
LABOR AND WAGES : General condition, with statistics of average wages of <i>farm laborers and domestic servants</i> for ten years.....	18
STATISTICS OF THE WEATHER : Showing details by months and stations or districts.	
Temperature, 1902.....	19
Temperature, 1882-1902 .....	20
Rain and Snow.....	21, 22
Sunshine .....	22
Toronto Observatory.....	23

	PAGE.
RURAL AREA ASSESSED : Showing by counties as taken by municipal assessor for 1902, the total area, acres cleared, acres in woodland and acres in swamp, marsh or waste lands ; also totals for the Province for the ten years 1893-1902 .....	24
STATISTICS OF FIELD CROPS : Showing by counties the area, produce, and market values for the year 1902, together with totals for the Province for the past ten years, and the averages for the period 1882-1902 ; also the average per acre.	
Fall Wheat.....	25
Spring Wheat.....	25
Barley .....	26
Oats .....	26
Peas .....	27
Beans .....	27
Rye.....	28
Buckwheat .....	28
Corn .....	29
Potatoes .....	30
Carrots.....	30
Mangel-wurzels.....	31
Turnips .....	31
Hay and clover .....	32
All field crops as above.....	32
RATIOS OF AREAS UNDER EACH CROP IN 1902 PER 1,000 ACRES OF CLEARED LAND.....	33
PASTURE—ORCHARD—VINEYARD—APPLES .....	34
STATISTICS OF LIVE STOCK : Showing by counties the number and value of stock on hand July 1, 1902, together with the number and value of those sold or slaughtered during the year ending June 30, 1902 ; also comparative totals for the Province.	
Horses .....	35
Cattle .....	36
Sheep .....	37
Swine .....	38
Poultry .....	39
WOOL : Showing by counties the clip in 1902 .....	40
BEES : Showing by counties the number of colonies and value (including outfit).....	40
VALUES OF FARM PROPERTY : Showing by counties the value of farm land, farm buildings, implements, and live stock .....	41
Farm property values per acre occupied .....	42
Value of buildings, implements, and live stock per acre cleared.....	42
Rental of leased farms .....	42
MARKET PRICES : Showing for the leading markets of Ontario the average prices of agricultural products for the last six months of 1902, with comparative market prices for the Province for the past ten years, and the averages for the twenty-one years period .....	43
CHEESE FACTORIES : Showing by counties the number of cheese factories in operation in 1902, the quantity and value of cheese made, the number of patrons and the amount paid to patrons, together with the totals for the Province for the past ten years .....	44
AGRICULTURAL STATISTICS OF THE UNITED STATES.....	45
CROPS IN MANITOBA AND NORTH WEST TERRITORIES .....	46

## PART II.—CHATTEL MORTGAGES.

CHATTEL MORTGAGES ON RECORD : Showing by counties the number and amount of chattel mortgages on record and undischarged on December 31, 1902, against (1) all occupations, (2) farmers ; also totals for the Province for ten years.....	47
INDEX.....	48

# ONTARIO BUREAU OF INDUSTRIES.

## PART I.—AGRICULTURAL STATISTICS.

### THE WEATHER.

The study of tables of temperature, rainfall, snowfall, and sunshine is most interesting when taken in connection with the question of crops ; for while much of the success in growth of any plant depends upon the nature of the soil, the quality of the seed, and the thoroughness of the tilling, it is also of importance that the particular crop should be suited to the various conditions of heat or cold, humidity or drouth, sunshine or cloudiness, prevailing during the period of its growth.

TEMPERATURE. The following table shows the average temperature of the Province for each of the six months April-September inclusive—practically the growing season—for the past ten years, and also the average for twenty-one years 1882-1902 :

Month.	1902.	1901.	1900.	1899.	1898.	1897.	1896.	1895.	1894.	1893.	1882-1902.
	°	°	°	°	°	°	°	°	°	°	°
January .....	18.7	19.0	21.9	18.7	20.2	19.5	18.4	17.3	23.1	10.3	17.7
February .....	18.1	13.0	17.1	15.2	22.0	21.8	19.2	14.5	16.9	14.7	17.9

April .....	43.6	45.0	44.8	44.5	42.1	42.7	46.3	43.3	44.3	38.7	41.8
May .....	53.2	54.6	54.6	55.7	55.5	52.9	60.1	56.9	53.7	52.2	53.7
June .....	59.2	65.8	64.1	64.8	65.6	60.9	64.8	68.0	66.1	67.6	64.1
July ..	68.6	71.9	68.2	67.5	70.2	71.9	68.8	65.5	69.1	68.3	68.0
August .....	63.5	67.5	70.9	68.5	67.7	64.2	67.2	65.3	64.0	66.1	65.8
September .....	59.0	60.1	62.3	56.2	61.8	60.8	56.8	60.5	61.1	56.0	58.6
October .....	46.3	48.5	55.2	50.0	48.7	50.1	43.4	41.4	48.8	48.2	46.6
November .....	41.0	31.9	35.3	38.0	34.9	34.9	37.8	34.5	31.6	35.1	35.1
December .....	20.9	22.7	24.7	25.1	22.8	24.6	24.1	25.8	27.7	20.7	24.1
Annual mean .....	43.9	43.9	45.0	44.2	45.6	44.4	44.0	42.9	45.1	42.0	43.3
Mean for six months, } April to September }	57.9	60.8	60.8	59.5	60.5	58.9	60.7	59.9	59.7	58.2	58.7

The mean annual temperature was 43.9°, which is the same as that of last year, although .6° above that of the twenty-one years 1882-1902. The mean for the six months April-September was 57.9°, which is 2.9° lower than that of the two years immediately preceding, and .8° lower than the average for the twenty-one years. March had an uncommonly high temperature, being 9.2° above its average for 1882-1902, while April and November also showed a higher temperature than ordinarily. June and August experienced a much lower temperature than usual, but none of the other growing months had any great degree of

variableness compared with their respective averages. December was  $3.2^{\circ}$  below its average for the twenty-one years.

**PRECIPITATION.** The fall of both rain and snow is given in the following table for ten years, together with the average for the twenty-one years 1882-1902. An inch of water is the equivalent of ten inches of snow :

Year.	November.		December.		January.		February.		March.		Total for five months.	
	Rain.	Snow.	Rain.	Snow.	Rain.	Snow.	Rain.	Snow.	Rain.	Snow.	Rain.	Snow.
	in.	in.	in.	in.	in.	in.	in.	in.	in.	in.	in.	in.

1898 .....	3.40	8.9	1.73	17.5	1.47	18.2	0.60	18.9	2.42	1.0	9.62	64.5
1897 .....	2.51	6.2	0.37	9.6	1.15	17.3	0.89	14.1	1.52	12.7	6.44	59.9
1896 .....	2.47	7.7	2.22	13.2	0.65	17.1	0.46	24.5	0.74	11.4	6.54	73.9
1895 .....	0.78	11.4	1.49	6.6	0.77	31.3	0.08	12.0	0.41	10.8	3.53	72.1
1894 ....	1.97	9.9	1.85	26.2	0.91	14.0	0.59	15.1	1.15	4.8	6.47	70.0
1893 .....	2.09	10.8	0.68	11.6	0.43	25.5	0.73	24.3	1.19	5.4	5.12	77.6
1882-1902.....	2.13	8.5	1.33	14.9	0.98	20.2	0.90	16.6	1.16	11.5	5.50	71.7

The rainfall of the Province for the five winter months comprising the table totalled 6.1 inches, or .6 inch more than the average for 1882-1902, but the snowfall was only 57.2 inches, or 14.5 inches less than that of the twenty-one years. None of the months call for much notice, excepting March, when the rainfall was 2.34 inches, or over double that of its average, while the snowfall of that month was only 2.5 inches, compared with an average of 11.65 inches for the twenty-one years.

The six months, April-September, however, comprise what is regarded as the growing season for most crops, and the following table gives the rainfall of these months for the last ten years, and also the average for the twenty-one years 1882-1902 :

Months.	1902	1901	1900	1899	1898	1897	1896	1895	1894	1893	1882-1902
	in.	in.	in.	in.	in.	in.	in.	in.	in.	in.	in.
April.....	2.12	2.26	1.44	1.10	1.45	2.52	1.26	1.49	0.99	2.61	1.58
May.....	2.44	3.67	2.03	3.43	2.43	3.38	2.10	2.36	5.72	3.35	2.86
June.....	3.92	2.14	2.83	2.46	2.83	2.83	2.39	1.37	2.32	3.15	2.83
July.....	5.49	3.90	3.96	2.78	1.11	5.36	2.79	2.02	1.72	2.44	2.83
August.....	2.02	2.78	2.15	0.81	2.64	2.62	2.86	2.81	0.84	2.67	2.49
September....	3.53	2.78	2.73	3.72	2.94	0.83	4.47	2.67	3.73	1.94	2.67
Total for six months....	19.52	17.53	15.14	14.30	13.40	17.54	15.87	12.72	15.32	16.16	15.26

The total rainfall for the six months was 19.52 inches, which is 1.99 inches more than that of the preceding year, and 4.26 inches more than the average for 1882-1902. May was the only month of the six to show a less precipitation, while July made a record of 5.49 inches of rain, or 2.66 inches more than the average of that month for the twenty-one years. This will partly explain the delay and difficulty experienced in harvesting the hay and fall wheat crops this year. Contrary to popular belief, April is the month having the least average precipitation in this Province—of rain as compared with the growing months, and of rain and snow as compared with the winter months.

**SUNSHINE.** In the following table the averages of sunshine are, as usual, derived from the records of the weather stations at Woodstock, Toronto, Barrie, Lindsay, and Kingston :

Months.	Sun above horizon.	1902	1901	1900	1899	1898	1897	1896	1895	1894	1893	1882- 1902
	hrs.	hrs.	hrs.	hrs.	hrs.	hrs.	hrs.	hrs.	hrs.	hrs.	hrs.	hrs.
January....	285.7	84.1	59.7	77.1	90.8	76.2	70.4	52.3	73.0	74.5	64.0	69.5
February.....	291.4	127.7	115.7	109.8	112.8	69.3	93.7	104.0	110.2	124.2	93.8	96.5

November.....	286.9	76.6	80.3	82.4	78.6	89.0	60.8	69.8	79.3	64.7	81.3	68.5
December.....	274.3	71.0	62.9	46.6	60.2	56.6	40.6	80.8	57.1	65.5	55.8	57.5
Total for the year	4463.3	1799.5	1852.7	2136.2	2058.3	1965.8	1923.9	2043.4	2036.3	1864.9	1921.7	1929.3
Total for 6 months April-Sept.....	2614.9	1187.2	1274.2	1494.9	1441.0	1399.0	1349.1	1412.9	1388.1	1279.1	1326.4	1355.2

There was less sunshine registered in 1902 than in any other year comprising the table. For the full year, the figures fall below the average by 129.8 hours, while for the six months they were 168 hours less than in the same period for the twenty-one years 1882-1902. April, June, July, September, and October were the months mainly responsible for the decrease, while January, February, November, and December had considerably more sunshine than ordinarily.

#### VEGETATION.

Correspondents did not agree regarding the state of vegetation on the first of May, some asserting that the growth in field and forest was then well advanced, and others that it was about normal, while the majority claimed that the season might be described as a rather backward one. In many quarters there was sufficient grass for pasturing sheep, although hardly enough for cattle; but it was considered that only a few warm days were needed to make a luxuriant growth, as the ground contained plenty of moisture, and bud and blade were ready to respond.

**SPRING SEEDING.** Most of the spring crops were got in somewhat earlier than usual, a number of correspondents reporting seeding as having been practically completed by the 1st of May. In most cases the seed-bed was in excellent condition, and the "catch" was one of the best for years. As correspondents wrote (May 1st), a considerable amount of the spring rain was above ground, and gave promise of a first-class crop should nothing untoward intervene. The sowing of field peas, however, had been delayed in many instances in order to escape the "bug."

### THE GRAIN CROPS.

**FALL WHEAT.** The condition of the crop of fall wheat planted in 1901, was thus described in the bulletin issued in November of that year: "There has been a very considerable and well nigh universal decrease in the acreage devoted to fall wheat, owing to the ravages of the Hessian fly. In order to secure the new crop against the pest, sowing has been deferred by many farmers to a later period than usual. While the bulk of the seeding was done during the first three weeks of September, a large number postponed the work until the following month. The condition of the ground was generally good, although dry in many localities, and where the young plants are visible they present as a rule a healthy appearance. Rain, however, is badly needed in some neighborhoods. In several western counties, more especially in those bordering on Lake Erie, the earlier sown wheat has been attacked by the Hessian fly which occasioned much injury. The principal varieties of fall wheat sown were Dawson's Golden Chaff, Red Clawson, and Genessee Giant."

The returns as to the conditions of fall wheat on May 1st, were thus summarized: "It is satisfactory to note that the injury to the crop by the fly so far has been much less than was feared. While a year ago complaints of losses by Hessian fly were common in nearly all the counties south of a line drawn from Huron to Wentworth—very extensive damage having been done to the growing fall wheat in the counties bordering upon Lake Erie—only a few of the correspondents now reporting speak in a positive manner of actual injury traceable to the fly, and these reports are confined to odd sections of Lambton and the Lake Erie counties. A considerable amount of fall wheat was sown late to avoid the fly, and this has not done as well as that got in earlier. Several correspondents remark that having sown fall wheat on oat stubble it has done poorly. The greatest injury to the crop so far appears to have been sustained from severe frosts and cold winds just after the snow left the ground, the exposed fields suffering considerably in some quarters. Taking the crop as a whole, however, the prospect is better than was hoped for six months ago. The loss from Hessian fly, wire-worm, and other insect pests has so far been comparatively small. There are some patchy places owing to trying spring weather and to local causes, and here and there portions of the crop have been plowed up or re-sown with barley; but, notwithstanding these drawbacks, there are many fields reported in excellent condition, and in a number of sections a large yield per acre is looked for."

August advices were to the following effect: "The yield of fall wheat has been from fair to large, except in Essex and most of the counties of the Lake Erie group. In several instances from 35 to 40 bushels have been reported, and the average yield will be considerably above the average for the last twenty years. The chief damage to the crop everywhere was from rain, which occurred so frequently as to delay the ripening of the grain for about a week later than usual, and which also kept the binder from working in many instances owing to the soft condition of the ground and the tangled state of some of the crop. For these causes a portion of the fall wheat had to be cut with the cradle. Mention was made in various counties of grain sprouting in the shock and in the field. Cutting began in some districts as early as the middle of July, but the bulk of the crop was harvested during the last week of the month, and on the

1st of August there still remained some to be reaped. On the whole the sample may be regarded as of good quality, although, as already stated, there has been some sprouting of grain. Comparatively little injury was done by insect pests, despite the fears entertained of the Hessian fly. Rust and smut were reported here and there throughout the Province, but not to a serious extent, and there will be an abundance of straw."

According to the November bulletin, the wet weather which prevailed during harvesting caused considerable sprouting among the fall wheat, and some of the grain was consequently reported as soft; but the greater part of the crop was described as "good," and even "excellent" in quality, while the average yield was one of the largest on record. The sprouting was confined almost entirely to the white varieties, the red wheats being credited with having more firmness and weight. The injury from the Hessian fly proved to be small after all; in fact, the chief damage to the crop was from rain. As in the case of the other cereals, there was an abundance of good straw.

**THE NEW FALL WHEAT.** The following references to the newly sown crop of fall wheat appeared in the November bulletin: "Reports vary greatly, even in the same counties, as to the area of wheat sown this fall as compared with last year's acreage. In both the Lake Erie and West Midland districts the increases and decreases will about balance each other; but each of the other groups will probably show a slight decrease in acreage. The counties forming the Niagara peninsula, facing either lake, report a decided increase in area of fall wheat over that of last year. In many sections of the Province the rain delayed harvesting, and this in turn kept back threshing and other operations, which largely accounts for the fact that the putting in of fall wheat this year will be a week or two later on the average than ordinarily. However, many purposely delayed putting in the crop in order to avoid the Hessian fly. This pest appears to have almost entirely disappeared, not one correspondent in fifty reporting it, while last fall its presence was commonly reported. The bulk of the crop was got in about the middle of September, although dates of sowing ranged from the last week in August to the 20th October. Except on clay land, the seed bed was in good condition, and as correspondents wrote the new crop of fall wheat was looking most promising, being healthy in color and vigorous-looking generally, although not having as much top as is usually seen at the same date. Dawson's Golden Chaff is the variety most largely grown, with Clawson a fair second, Genesee Giant, Michigan Amber and Manchester also showing up fairly, with about forty other varieties scattering."

**SPRING WHEAT.** The August bulletin contained the following regarding spring wheat:—"This crop is expected to be a good one both in point of yield and quality, although a number of poor fields are to be found in various sections. Most of the injury to the crop has been caused by heavy rains, which have caused considerable "lodging," the straw being unusually long. A few complaints of rust have been made, but the general tenor of the reports is of a cheering character. Harvesting will be later than usual, very little of the crop being cut until about the 7th of August."

November returns were to the effect that the yield of spring wheat was considerably above the average, and that the quality of the grain was good. The crop had suffered but little from sprouting, or from any other cause, and was set down as first-class.

**BARLEY.** This crop was thus dealt with in the August bulletin: "In a few localities the barley harvest began in the third week of July, but most of the crop was yet to be cut on the last of August, the wet, dull weather having delayed operations. There will be a large yield of plump grain, much of which will be discolored, although considerable is reported of good color. As much of the barley raised in the Province is now fed on the farm, the matter of color is not so important as it was a few years ago, and for general purposes the crop may be termed a first-class one. There will be an immense amount of straw, much of which has been

lodged by the rain, and some of it will have to be cut with the mower. A few correspondents mention rust, but no serious injury has been sustained by the crop apart from rain."

The November statements of correspondents were to the following effect: "An immense growth of straw, and a large yield of plump but more or less discolored grain, is a fair summary description of the barley crop. In fact, several correspondents call it the best crop in years. The chief injury sustained was from rain."

**OATS.** The August bulletin had the following regarding this crop: "This promises to be one of the best years on record for oats, as regards both grain and straw, especially on high lands and on well drained soils. The straw is usually described as tall, straight, and well-headed, but a considerable portion of the crop has been beaten down by the heavy rains prevailing during the latter part of July, and there will be much trouble in some quarters in harvesting the crop with the binder. A few complaints of smut and rust are made, but not sufficient to be regarded as serious. Cutting will not be general until the second week of August, and may run a week or so later, as this crop, like other cereals, has been ripening very slowly this season."

November returns were on the whole favorable. The bulletin issued in that month said: "This crop has given a most generous yield, and although some of the grain is said to be light and chaffy, the greater number of our correspondents describe it as of good quality, and sometimes as "extra good," especially that which was sown early. The growth of straw was something unusual, and much of the crop lodged, and was cut with great difficulty. Some rust was complained of, and cut-worm was reported in a few localities; but apart from the rain the crop suffered very little."

**PEAS.** More attention has been given to the pea crop this year than for many a season, owing to the havoc wrought by the pea weevil, or "bug" as it is frequently called. The August bulletin had the following concerning this crop:—"Many farmers abstained from sowing the common field pea this year on account of the depredations of the 'bug' during the last two or three seasons, and the grass pea was largely substituted; but the rainy weather caused the crop to run very much to straw, and so lengthened the period of blossoming that in many instances the pods have developed imperfectly, while in Haldimand and Wentworth this variety of pea has been attacked by a green aphid. The yield of the pea crop generally is one of the most irregular on record, some correspondents reporting large returns, while others describe the yield as a very poor one—in some instances not worth cutting. Owing to the frequent rains mildew has set in in various localities. Cutting was not expected to be general until about the 11th of August."

While a few correspondents, writing regarding crop conditions on November 1st, spoke favorably of peas, the greater number regarded the crop as one of the poorest on record. In very many cases the common or round pea was not sown, in order to avoid the weevil, the "Grass" pea, a flat variety, being largely substituted. The crop made a very rank growth, owing to frequent rains, and in many instances podding proved to be a complete failure. Much mildew also resulted from the wet weather. The bug was reported as appearing in nearly every county where the common round pea is grown as a regular field crop.

**BEANS.** Judging by the remarks of correspondents at the beginning of August, this crop suffered more than any other from the wet weather. In the county of Kent, where the bulk of our beans are raised, it was sometimes necessary to plant a second or third time on account of the earlier plantings having been drowned out.

The November bulletin said of beans: "This crop may be considered as the worst of the season. In many cases it turned black or rotted, and a positively good word as to its condition is not given by anyone. In fact, several correspondents describe it as being fit only for hog-feed. Notwithstanding these unfavorable reports some fairly good beans will likely find the market."

**RYE.** Only a few correspondents now speak of rye as a regular grain crop, most of it being cut for green feed. Where raised for the grain it turned out very well this season, although growing rather rank like the other cereals, and suffering somewhat from the unusual amount of rain.

**BUCKWHEAT.** This crop is not largely grown for grain, although it appears to be coming into favor. Correspondents describe it as being a good crop this year; but it was harvested somewhat late, although in time to escape the frost almost entirely.

**CORN.** The midsummer prospects of corn were thus referred to in the August bulletin: "The indications are that this crop will be considerably below the average, owing to the cold of the earlier part of the season, and the excessive rains of July. The greatest injury from the latter cause was sustained to the crops growing on low-lying lands, or undrained lands. In many cases the failure was so complete that the fields were plowed up. While corn is everywhere backward, reports from numerous localities note that with the setting in of fine warm weather it is making good progress, so that with the continuance of favorable weather a fair yield may be obtained. The damage done by crows appears to have been unusually heavy, more especially in the Lake Huron and Georgian Bay counties."

The bulletin, dealing with conditions existing on November 1st, contained the following regarding corn: "Owing chiefly to the effect of frequent rains, and the comparatively cool weather prevailing during the greater part of the growing period, corn will not be up to the average in either yield or quality, except in a few special cases. From different portions of the Province come statements that a portion of the crop was not fully matured, and, as a consequence, there will be more soft corn than usual, and the quality of much of the ensilage may not be up to the standard. Although the crop was harvested a week or so later than ordinarily, only a little of it was caught by frost, and even then serious injury was not done. In a few localities some of the corn land was plowed up and sown to buckwheat."

## HAY AND CLOVER.

Reports on May 1st concerning clover were favorable generally, many of them being enthusiastically so. Here and there accounts came in of "heaving" during the winter or spring, but nothing general was reported in the way of injury to the crop. As correspondents wrote the prospects for hay were never better, both old and new meadows promising well.

The August bulletin had the following regarding the cut of hay and general condition of the crop: "Grasses of all kinds made an immense growth this year, but where grown for hay the wet weather told against the crop in the matter of both cutting and curing. So much was this so, that although in many sections mowers had started in the first week of July, there was still some hay uncut at the end of the month, the frequent heavy showers having delayed operations in the field. Notwithstanding all this a considerable number of farmers were fortunate enough to get their big cut of hay housed in first-class condition; but much of the crop will be of only medium quality, and a portion of it will be unfit to market. Although the first cut has been remarkably heavy, the weather since mowing has been so favorable to vegetation that the second growth of clover is already a large one."

**CLOVER SEED.** The following was given in the November bulletin: "There has been an immense growth of clover this year, the second cutting in some cases exceeding the generous product of the first; yet, from various causes, the amount of red clover seed threshed will be much smaller than usual. The wet weather is said to have given a rankness to the stalk at the expense of the heads, while from every district comes more or less complaint of the ravages of

the midge. Very little damage was, however, occasioned by frost. One correspondent, speaking of red clover, summed up the situation in the phrase, 'Plenty of feed, but little seed.' Where alsike was grown for seed favorable reports were given."

### FIELD ROOTS.

The August bulletin had the following paragraph concerning roots generally: "The rainy weather of the season has been upon the whole favorable to root crops, which as a rule are in excellent condition, and promise to yield heavily. On some of the low lands, however, they have been drowned out, and the continuous rains in many places have greatly interfered with cultivation. There is very little mention of any damage from insect pests or blight. Some injury was inflicted in the eastern counties by spring frosts."

POTATOES. Following is a summary of the reports sent in about the beginning of August: "The prospects are favorable for a large yield of potatoes, the vines, especially on high land, being as a rule in excellent condition and promising well. Owing to the excessive moisture of the season the tops are unusually long and heavy. The rains have caused considerable injury in low-lying and heavy lands where rot is threatened in some localities. Some damage has been caused by the potato bug where the application of Paris green has been neglected, but this pest has not been nearly so destructive as in former years. In some western sections early potatoes are mentioned as presenting a better showing than those planted later. With favorable weather for the remainder of the season, the crop is likely to be an abundant one."

The November bulletin said: "Since the issuing of the August bulletin, when potatoes were booked for a large yield, rot has appeared among the crop in practically every part of the Province, the losses from this source being variously estimated at from 10 to 50 per cent. Some of the correspondents go so far as to state that on certain fields the rot was so bad that the crop will be let go altogether. In several sections there will be only about enough for home use and for seed. In some districts the rot was preceded by a blight, while in other quarters the potatoes appeared to rot as they were dug. But for the rot the crop would have been an immense one. On flat and low-lying lands the crop suffered most severely, while on sandy soils and on high lands injury by rot was much less."

CARROTS. August reports were to the effect that carrots were doing well, reports from the northern districts being noticeably favorable. The November bulletin remarked: "Carrots are reported as an excellent crop where grown, but they are not so generally raised as turnips or mangels. Early sown were particularly good. A few low fields were more or less drowned out."

MANGEL-WURZELS. According to the August bulletin mangels were an exceptionally good crop. November returns were also most favorable, the bulletin then issued containing the following: "Except on low-lying fields mangels were a first-class crop, being frequently reported as extra good. Most of these roots had been secured by the 1st November."

TURNIPS. When reports were sent in early in August turnips were said to be thriving, particularly on high and light land. According to the November bulletin, "the bulk of the turnip crop was reported to be in fine condition, although odd mention was made of rot on low lands owing to the frequent rains. In a few localities the crop was housed by the first November, but in most sections there was still considerable to be harvested at that date."

SUGAR BEETS. Sugar beets have been grown in many sections of the Province for the first time this year, not only for sugar making but also for stock feeding. They have done fairly well, especially where grown for feeding. The great drawback to this crop, and indeed to all the root crops, was the great lack of labor necessary to harvest them in the best manner. Not for many years have our correspondents complained so much regarding the scarcity of suitable help in the fall of the year.

## FRUIT AND FRUIT TREES.

The spring opened with favorable prospects for fruit. The May bulletin said : " Reports from the districts where the bulk of our fruit is grown are decidedly optimistic in tone. There have been no ice storms this year to break off limbs and disfigure trees, and the general appearance of orchards is all that could be desired. There is promise of abundant blossom for nearly every variety of fruit, and if frosts and heavy rains keep off during the period of bloom a record year for fruit generally may be looked for. In the counties lying between the St. Lawrence and Ottawa rivers, however, there has been a serious visitation of field mice, which have swarmed over the orchards and wrought much serious injury by girdling young apple and other trees. A correspondent in Fitzroy states that mice ate 44 rods of thorn hedges on his premises. The only complaints of mice in the Lake Ontario district came from the county of York and Ontario, and of the western Ontario counties, Middlesex was the only one to send a report of their presence. Several correspondents in the fruit growing centres express fear that the tent caterpillar may do much injury unless actively checked. A few also complain of the presence of the borer. Warnings are also sent in regarding black-knot in cherries. It seems strange that so few references are made to the San Jose Scale. Small fruits came through the winter in good condition as a rule, although in some quarters berry bushes were considerably broken down by snow. These reports were all made before the cold dip of May 10th, and therefore represent the condition up to that time."

August reports were summarized as follows : " Apples promise to yield very well, though reports differ greatly as to the present condition and prospects of the harvest. The trees seem to have been remarkably free from tent caterpillar, codling moth, and other destructive insects, the fruit presenting good samples with the exception that it is badly spotted in some cases. Owing to wet and cold weather, the yield, which at one time promised to be abundant, will be considerably reduced in volume, as much of the fruit has dropped off the trees. Winter apples in particular are likely to be scarce, the earlier varieties being much more plentiful. Reports as to the yield of plums are generally unfavorable. The crop is a light one in most sections owing to the injury caused by spring frosts and the later rains, while, where spraying has been neglected, the ravages of the curculio have been very destructive. Some of the fruit has been damaged by rot. Peaches have generally done well, and there will be an abundant yield. Pears also promise satisfactory returns in most neighborhoods. The reports as to cherries are not so encouraging. In many cases the crop was a light one, one cause assigned being the prevalence of black-knot, especially in the western counties. Grapes have sustained considerable injury from frost, and the wet weather has in some localities resulted in mildew, but the yield bids fair to be an average one. Berries have been a large crop in nearly all parts of the Province, but rainy weather has considerably interfered with picking and marketing them."

The following reference to fruit appeared in the November bulletin : " Notwithstanding heavy losses from wind and hail storms the yield of apples has been a good one in most parts of the Province. In some of the western counties, and in a portion of the Lake Ontario group, there has been so generous a yield, and the prices offering have been so low, that thousands of bushels of apples were allowed to rot on the ground, or were fed to live stock. Insect pests appear to have wrought less injury this year than commonly, but there has been an unusual amount of scab on the fruit. In fact the prevalence of scab has been one of the reasons for the very cheapness of apples. Pears have given a fair yield, but they also suffered from scab and blight. Peaches yielded well, but some of the late varieties did not fully mature, and lacked perfect flavor. Several correspondents complain of great injury being done to this crop by San Jose scale in neglected orchards. Correspondents have had less than usual to say

about grapes, but there has been a fair yield with no serious drawbacks. Fruit trees generally are reported in good condition, excepting in some of the St. Lawrence and Ottawa counties, where many young apple trees were girdled by mice during the winter."

### MISCELLANEOUS.

**FLAX.** So far the growing of flax has been mainly confined to the western counties. The majority of the reports received in August and November were to the effect that the crop would have been an excellent one but for the way in which it suffered from being beaten down by the heavy rains. Judging by some of the remarks of correspondents, it would seem as though interest in the growing of flax was reviving.

**HOPS.** The season was a good one for hops. Where grown, the vines were heavily laden and were in good condition generally.

**LUCERNE.** There is every indication that this crop is about to take its place with others as a staple one for hay and pasture. Most of our correspondents who have tried lucerne (also called alfalfa) are favorably impressed with it.

**RAPE.** This crop continues to grow in favor as a means of turning off sheep in the fall, as well as for feeding to cattle and swine. It is also used for plowing under in the fall, more especially in orchards and vineyards.

**TOBACCO.** Reports regarding this crop were not so full as desired, but would indicate that the crop was only middling as to yield, although of fair quality. The frequent rains during July told against its success. November reports stated that it was late in maturing, and that it was somewhat slow in curing. The yield was 3,070,717 pounds, against 3,113,580 in 1901. The acreage was 2,961, as compared with 7,871 in 1898, when the crop was 10,560,590 pounds. Over 90 per cent. of the crop was produced in the counties of Essex and Kent.

**THRESHING AND MARKETING.** The November bulletin had the following: "There has been more grain to thresh than usual, and on account of the wet weather prevailing at harvesting much of it was cut late. The consequence is that while many correspondents report threshing as practically completed, a large number claim that much still remains to be done in this line, several complaining that it has been impossible to get enough threshing machines to do the work demanded. Marketing has not been so general as at the same period in other years. The lateness of threshing, and the shorter time given for fall plowing, have had something to do with this; but many correspondents lay stress upon the fact that most of the coarse grains, and some of the wheat, will be fed to live stock, more especially as the pea and corn crops have been comparative failures. Oats, being very abundant, have been sold freely, although a large quantity will be kept on hand on account of the low prices now being offered. Wheat has been moving slowly. Comparatively little barley has been disposed of, and unless prices for this grain take a decided rise little is likely to be sold, as correspondents declare that at ruling prices it pays better to feed the barley to cattle and hogs. In fact, barley is now, more than ever, considered a leading feeding crop."

**FARM IMPROVEMENTS.** The necessity of drainage has been greatly impressed upon agriculturists during the wet season of 1902. The rains prevented much work being done in this line, and labor was scarce and high; nevertheless a considerable number of correspondents reported progress in both underdraining and the making of open drains. An immense amount of wire fencing was put up during the year in every part of the Province. A large number of new farm buildings—houses, barns and stables—have also been erected, and many old barns have been raised and enlarged, and cement or stone walls built beneath them, thus affording better accommodation for all classes of live stock. Cement floors also appear to be coming

more into favor. The scarcity of labor, and the high prices of material, are said to have kept back some intended improvements in the way of better houses and barns.

**FALL PLOWING.** In the western half of the Province fall plowing was very far behind when correspondents reported on the last of October—scarcely an acre being turned up in some townships of the Lake Erie group. In the more eastern counties work in this line was more advanced, although not up to the average. Several reasons were assigned for the backward condition of plowing, viz., the late harvest, the extra amount of grain threshed, the scarcity of labor, and the wet weather. Hopes were expressed by some correspondents that with open weather until the middle of November a fair amount of fall plowing might yet be done.

### LIVE STOCK AND THE DAIRY.

Live stock of all classes came through the winter in good condition. The May bulletin said: "A few comparatively light forms of distemper among horses are reported in several localities, and in the county of Lanark some cases of strangles occurred, but the majority of correspondents speak of horses as being in an unusually good condition for the time of year, and spring work has had only a good effect upon them. Their chief drawback appears to have been a rather lighter ration of oats than ordinarily, owing to a scarcity of that grain. Cattle, as a rule, are also in excellent form. Some report them as being rather thin, but none dispute their general good health. Ringworm appeared among several herds in some of the Parry Sound townships, and odd cases of lumpy jaw occurred elsewhere, but with these exceptions there is a remarkably clean bill of health to be shown for cattle. Sheep have done exceedingly well, a large number of lambs having been dropped, which have turned out healthy and vigorous. The dog is inveighed against by several correspondents as being a nuisance. Swine have also done well as a class. Cases of disease and death among young litters have been reported in several parts of the Province, but these appear to have resulted from purely local conditions, and in no section have losses been general. In fact, references to the steady way in which bacon hogs have been fitted for the market is a feature of the reports. Fodder generally has been sufficient, although straw has been rather scarce, and the high prices prevailing for coarse grains and mill feed tempted many raisers of live stock to feed closer than usual. Several correspondents refer to the silo as having been an excellent aid in carrying cattle and other animals through the winter."

The August returns were to the following effect: "The unusually large amount of rain which has fallen this summer has kept the pastures green and fresh, and promoted a luxuriant growth of grass. Consequently live stock everywhere are in fine and healthy condition. No mention is made by any correspondent of the prevalence of any disorder affecting stock, and the attacks of flies appear to be less troublesome than in other seasons. From almost every neighborhood it is reported that the supplies for the fall and winter keep of live stock are abundant, as the hay and root crops are above the average, and straw is of unusual length. Much of the hay, however, is of inferior quality. The flow of milk is good, and the season's output of cheese and butter will be heavy. Some eastern returns note a considerable increase in the number of cows kept, while in a few western localities a decrease is noted."

The bulletin issued in November contained the following regarding pastures and live stock: "Summer pastures were among the best reported for years, and fall fields are also praised by most of our correspondents, the only adverse statements coming from odd points in some of the counties along the St. Lawrence river. Live stock were much benefited by the unusual freedom from insects during the season, some correspondents ascribing the absence of such pests to the very cool and rainy character of the summer. Young cattle have come through the

season in good flesh and in first-class trim generally, but older animals are hardly as heavy as usual, although considered in tip-top condition for fattening. In several places "Christmas cattle" have been tied up for finishing off, although in most parts of the Province the splendid state of the pastures, and the favorable conditions generally prevailing, warranted farmers in keeping their stock still on the grass. Sheep do not appear to be increasing, although said to be in first-class condition where raised. On the other hand swine raising is still growing in favor, and in most parts of the Province hogs are now being turned off all the year round, as several correspondents put it. Hog cholera was reported in some portions of Kent, and a Wellington correspondent speaks of spring litters as dying off, but with these exceptions all classes of live stock seem to have been remarkably free from disease. The supply of fodder will be fully adequate in most sections of the Province. Not for many years have live stock of all classes gone into their stables in better shape, both as regards condition and the prospects for generous winter feeding. A number of new silos have been erected in every group of counties, chiefly of the barrel or round style. A few new silos have been built of concrete. Fears are entertained that a considerable portion of the corn is not fully matured, and that the ensilage may not have full feeding value."

**POULTRY.** It is easy to discern in the remarks of correspondents an increasing note in favor of pure-bred poultry on the farm. Several varieties are named as desirable, but the Plymouth Rock appears to be most in favor. Notwithstanding this, considerable difference of opinion is still expressed as to the profits of poultry raising. The wet and cold weather prevailing during the early part of the summer told heavily against the vitality of chicks of all classes, although young turkeys seemed to suffer most severely, and were very much thinned off in numbers. With the exception of a few cases of hen cholera in one or two western localities, very little disease among poultry has been reported. Eggs were not plentiful this year, as a rule, but prices paid were on the whole very satisfactory.

**VALUES PER HEAD.** The statistics of live stock will be found on pages 35-41. The following table gives the average value per head of stock on hand for the past ten years :

Classes of live stock.	1902	1901	1900	1899	1898	1897	1896	1895	1894	1893

**BEES AND HONEY.** August returns regarding the apiary were to the following effect: "Reports as to the yield of honey vary greatly according to locality, but are on the whole favorable. The average production will be about 45 pounds per hive. The bees have swarmed freely, too much so in the opinion of many correspondents, though in some parts the swarming has been late in the season. They are in a thrifty condition everywhere, and remarkably free from disease. The supply of nectar was abundant in most localities, but the wet weather seriously interfered with honey-making."

The November bulletin said: "Bees swarmed well, but the wet and cold character of the early part of the season delayed honey gathering. Basswood was not plentiful, but there was an abundance of clover in the fall, and some gain was made in stores. The average yield per colony will be about fifty pounds. One experienced beekeeper in the county of Haldimand states that from 200 hives he got six tons of extracted honey, but very little comb. Some reports, however, are to the effect that in various quarters bees may have to be fed back."

**THE DAIRY.** The following summary of the condition of dairying is taken from the November report: "The splendid condition of pastures during the summer helped to an abundant flow of milk, and both cheese factories and creameries were kept well supplied. A number of correspondents in the eastern portion of the Province describe the cheese industry as "thriving," or "booming," but in the western counties butter making is coming more and more into favor. Mention is frequently made, more especially in western Ontario, of cream separators being purchased by farmers, and several correspondents point out that the use of these separators means the keeping of the skim milk on the farm for the calves and the pigs. The quality of the butter made this season is said to be an improvement over that of last year, and on the whole prices have been satisfactory. Shorthorn grades, Ayrshires, Holsteins, and Jerseys, in the order named, are given as the breeds of cattle most in favor for milking purposes on Ontario farms."

**CHEESE FACTORIES.** The number of cheese factories operated in 1902 as reported to this Bureau, shows a decrease of forty. The factories closing down were mostly small concerns, the proportionate expenses of which left too small a return to the patrons. Some are accounted for by amalgamation, while a few others gave their entire attention to butter making. However, the season's output of the number of factories reduced to 1,127 was 146,805,776 pounds, or nearly 6,000 tons in excess of 1901. This, combined with better market prices, brought to the patrons \$13,153,255 or \$2,338,717 more than in 1901. This amount includes cost of collection or delivery and is therefore equivalent to prices delivered at the factory.

**CREAMERIES.** The following comparative table gives the statistics of the creameries operated in Ontario for the ten years 1893-1902, showing the quantity and value of butter made, the average number of patrons, the average price of butter per pound, and the amount paid to patrons for milk or cream supplied:

Year.	No. of creameries in operation.	Butter made.		Average No. of patrons.	Average price of butter per pound.	Amount paid to patrons for milk or cream delivered.
		Quantity.	Value.			
		lb.	\$		cts.	\$
1902 .....	282	11,082,078	2,181,400	21,672	19.68	1,887,026
1901 .....	286	9,047,260	1,798,264	19,826	19.88	1,548,576
1900 .....	308	9,041,468	1,819,290	21,803	20.12	1,550,251
1899 .....	323	9,113,964	1,746,362	22,090	19.16	1,448,411
1898 .....	282	9,008,992	1,632,234	22,731	18.12	1,294,220
1897 .....	214	7,708,265	1,403,609	18,909	18.21	1,139,463
1896 .....	170	6,033,241	1,101,232	12,245	18.25	.....
1895 .....	135	4,553,708	868,382	9,664	19.07	.....
1894 .....	115	3,162,550	662,297	8,298	20.94	.....
1893 .....	74	2,707,570	574,156	7,852	21.21	.....

Although a few new creameries were started in 1902 many of the winter creameries did not operate. The amount paid to patrons for milk or cream in 1900-2, included the cost of collection. The number of creameries includes the skimming stations.

### LABOR AND WAGES.

The remarks of correspondents in May were to the effect that farm labor was very scarce, and of rather poor quality as a rule, too many of the better class of farm hands having gone to the Northwest during recent years. The only hope of the future, according to some, lay in the invention of more labor-saving machinery. Domestic servants on the farm were reported to be more difficult than ever to find.

August reports were thus summarized in the bulletin issued in that month: "The scarcity of labor during the haying and harvesting seasons is a chronic complaint in all sections of the Province, and the present season offers no exception in this respect. Extra help appears to have been difficult to obtain almost everywhere, and wages have had decidedly an upward tendency. Many correspondents who state that the supply of labor is adequate, couple this opinion with the statement that but few men are hired, as the farmers are doing their own work with the aid of machinery, or by exchanging services with their neighbors. Where a reason is assigned for the scarcity of help, it is generally attributed to the preference of young men for city life, emigration to the Northwest, and the higher inducements offered by the lumber camps being also referred to as causes for the shortage. There are numerous complaints as to the quality of the labor obtainable."

The following appeared in the November bulletin: "All classes of farm laborers have been difficult to obtain during the season. In a few instances local reasons are given for the scarcity of hands, such as lumbering, handling beets for sugar factories, etc.; but the exodus to New Ontario and the Northwest appears to be the chief cause, and the drift of rural population citywards also continues. It is pointed out many times, both directly and indirectly, that the class of persons leaving Ontario farms for the reasons above assigned is much superior to those who are being brought in to take their places. In this connection a number of correspondents seriously state that even the introduction of Chinese labor would be better than the continuance of the condition of things now prevailing on the farm during the busy season. Notwithstanding the introduction of labor-saving machinery, the supply of good farm hands has been so scarce that more land is being given to pasture. Domestic servants on the farm are still hard to find, town life being so much more attractive. Wages for all classes of farm help are not likely to fall, and several aver that it will be utterly impossible for farmers to stand any increase in rates."

The following table gives the average rate of wages paid farm laborers by the year and by the month, with and without board, for ten years, together with the average for twenty-one years; also the monthly wages paid domestic servants on the farm:

Farm Laborers.	1902.	1901.	1900.	1899.	1898.	1897.	1896.	1895.	1894.	1893.	1882-1901.
Per year in yearly engagements:	\$	\$	\$	\$	\$	\$	\$	\$	\$	\$	\$
With board .....	165	165	155	149	148	144	144	150	156	160	158
Without board .....	268	263	248	243	246	236	243	246	247	255	251
Per month for working season:	\$ c.	\$ c.	\$ c.	\$ c.	\$ c.	\$ c.	\$ c.	\$ c.	\$ c.	\$ c.	\$ c.
With board .....	18 52	17 78	16 57	15 38	15 31	14 29	14 57	15 38	16 55	17 13	16 86
Without board .....	27 51	27 05	25 73	24 93	25 44	24 47	24 11	25 45	25 61	25 97	26 25
Domestic servants per month	7 15	6 90	6 65	6 19	6 09	5 97	6 11	6 07	6 23	6 47	6 30.

## TEMPERATURES OF 1902.

TABLE I. Showing for each month the highest, lowest, mean highest, mean lowest and mean temperature at the principal stations in Ontario in 1902; also the annual mean for each station.

MONTHS.		Saugeen.	Biram.	London.	Woodstock.	Stoney Creek.	Toronto.	Lindsay.	Gravenhurst.	Ottawa.	Rockliffe.

## MUNICIPAL STATISTICS :

PAGE.

Comparative tables as to <i>population, assessed values, taxation and debt</i> of Ontario municipalities .....	v.
Summary financial statement for all the municipalities of Ontario, being the aggregate of the several items of <i>Receipts, Disbursements, Assets and Liabilities</i> for ten years, 1892-1901 .....	vi.

## POPULATION, AREA, ASSESSED VALUES AND TAXATION IN 1902.

Showing details for municipalities arranged in alphabetical order, together with the average rate of taxes per head of population, and the average rate on the dollar :	
Townships .....	2
Villages .....	38
Towns .....	46
Cities .....	66
Comparative totals for the Province for seventeen years, 1886-1902 .....	71
Showing total for township, town, village and city municipalities grouped into county limits, and giving comparative totals for "county limits" for five years, 1898-1902 .....	72

## RECEIPTS, DISBURSEMENTS, ASSETS AND LIABILITIES FOR 1901 :

Showing an abstract statement for municipalities arranged in alphabetical order :	
Townships .....	2
Villages .....	38
Towns .....	46
Cities .....	66
Counties .....	74
Comparative aggregate for ten years :	
Townships .....	60
Villages (9 years) .....	62
Towns (9 years) .....	64
Cities .....	66
Counties .....	74
Showing totals for townships, town, city and county municipalities grouped into county limits, and giving comparative totals for "county limits" for five years, 1897-1901 .....	82

## PART III.—MUNICIPAL STATISTICS.

### POPULATION, ASSESSMENT AND MUNICIPAL DEBT.

The following statement is compiled from the summarized tables and gives population, total assessment, amount of taxes imposed, the amount of debenture and floating debt, together with the amount paid each year by all municipalities of the Province for interest for the seventeen years, 1886-1902.

Year.	Popula- tion.	Total assessment.	Taxes imposed for all purposes.			Debenture debt.		Floating debt.	Interest paid on loans and deben- tures.
			Total.	Rate per head.	Mills on the dollar	Total.	Rate per head.		
		\$	\$	\$ c.		\$	\$ c.	\$	\$

\* Statistics of debts for 1902 are not yet complete.

In 1902 there were 507 township municipalities, 105 towns, 135 villages, 14 cities and 28 counties.

The changes in population, assessment and taxation for townships, villages, towns and cities for the seventeen years are shown in table on page 71, while a comparison of the aggregate financial transactions of townships for ten years will be found on page 60, of villages on page 62, of towns on page 64, of cities on page 66, and of counties on page 54. The combined transactions of all Ontario municipalities for ten years are given herewith.

## FINANCIAL STATEMENT—ONTARIO MUNICIPALITIES.

Summary statement showing for all Municipalities in Ontario (including counties, townships, cities, towns and villages), the total of the several items of receipts, disbursements, assets and liabilities for the ten years ending December 31st, 1892-1901.

\* Including \$85,531 erroneously tabulated as a Sinking Fund in the County of Grey; also \$271,823, being Clergy Reserve Funds. † Exclusive of school property.

(a) All municipalities; (b) township, cities, towns and villages; (c) counties; (d) counties; (e) towns; (f) counties, cities, towns and villages; (g) townships, towns and villages.

## NOTES.

Although the "disbursements" of all Municipalities amount to \$31,745,746 in 1901, there are some items of a duplicate nature and others which are not strictly "expenditures" of the year.

Of the former we have county road grants of \$19,873 and non-resident taxes \$40,847 paid to the minor municipalities and expended by the latter; also \$1,073,442 paid to county treasurers for levies and expended by the counties.

Of the other class we find \$2,720,587 in sinking funds and other investments and deposits, principal of debentures redeemed amounting to \$2,290,805 and refund of moneys borrowed amounting to \$6,660,448; all of which were *expended* in some previous year. The item of administration of justice should be diminished by \$122,330, and schools and education by \$144,370, both of which amounts were received from the Legislature.

By deducting the above disbursements we get a net "expenditure" in the year 1901 of \$18,673,044, or \$9.20 per head of population for municipal and school purposes, as compared with \$7.83 in 1896, a year in which the item entitled "construction works" was comparatively low and was \$1,619,585 less than in 1901.

The payments on account of schools and education include only the aforesaid \$144,370, the proceeds of debentures, \$173,272, and school taxes collected through the municipal corporations. The expenditures from fees and other sources of school revenue are not, therefore, included. The \$144,370 is the Legislative grant to counties only, and does not include any Legislative moneys paid direct to schools.

The "cash in treasury" does not include sinking funds, but several municipalities borrowed from these funds amounts aggregating \$181,213 in 1901 to balance their general accounts.

The ratio of debenture debt to total assessed value increased from 4.3 per cent. in 1886 to 7.12 in 1901.

An apparent discrepancy exists between the 'county rates' as received by county treasurers and the aggregate paid by local municipalities. In many of the original returns we found the payment by the local municipalities was merely the balance on this account by deducting the non-resident taxes collected. These were corrected, but a few may have passed undetected owing to the absence of details. The main difference, however, is due to moneys *in transit* at the end of the year, this being a popular time for settlement. Money paid by a local municipality on December 31, would not be received from the bank until January 1, that is, the next year.

The population as shown by the assessors' returns is the aggregate "number of persons in the family of each person rated as resident." Although it differs from the true population the figures as a comparative issue are valuable, and especially so, as they are procurable annually. Like other figures of the assessor, these are confined to such territory under organized municipal government. The Dominion census, on the other hand, which is taken but once in ten years, takes in all the territory in each Province. It includes population in unorganized territory and the Indian Reserves.

\*This large decrease in personal property was due to a change in the Assessment Act, which exempted farm live stock, etc.

---

## COMPARATIVE TABLES

SHOWING FOR FIVE YEARS, STATISTICS FOR MUNICIPALITIES GROUPED  
INTO COUNTY LIMITS.

---

## POPULATION, ASSESSMENT AND TAXATION.

Statement of municipalities of Ontario (townships, towns, villages and cities) grouped into County limits, showing for 1902 the population, the area, the assessed values and amount of taxes imposed for all purposes, inclusive of schools, as shown by the assessment and collection rolls, together with the average rate per head of the resident population, and mills on the dollar; also comparative totals by Counties for five years, 1898—1902.

Municipalities.	Population.	No. of acres assessed.	Assessed values.				Taxes imposed for all purposes.
